Burnett's Lawn Grass Seed Mixtures

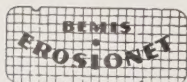

TESTED and PROVEN MAXIMUM FREEDOM FROM WEEDS HIGH GERMINATION and PURITY

The Satisfaction of a Perfect Lawn

A fine lawn is obtained by the careful and exact fulfillment of three fundamental requirements. Preparation of the seed bed, the use of good grass seed and the proper maintenance of the turf once established. These three factors are of equal importance, and failure to meet the requirements of any of these will make the efforts expended on the other two of little avail. **Burnett Bros. Inc.**, with a reputation of supplying grass seeds of the highest quality for a period of over 40 years, assume the responsibility of furnishing good seed. We guarantee you will find a beautiful Lawn easily obtainable if certain simple but essential rules are followed in its creation and maintenance. Our literature on Lawns is yours for the asking.

WHITE CLOVER in your Lawn?

Many people object to the appearance of Clover in their lawns, preferring just the uniform all-grass texture. For this reason we do not put it in our mixtures (except Permanent Turf). If desired, it should be sown separately. Prices listed on page 4.

Shady Place Lawn Seed Mixture

Shady Place is a well balanced mixture of shade tolerant grasses incorporating a smaller proportion of grasses that will also do well in the sun. This formula makes it perfectly adaptable to fully or partly shaded areas. Soil under trees is in most cases impoverished and grass roots have to compete for food with the tree roots themselves. It is therefore wise to fertilize liberally in early Spring and early Fall to keep the turf growing and in good condition. If the soil is found to be too acid through lack of sunlight and dampness, add lime and loosen the soil well before seeding. 2½ lbs. \$2.85, 5 lbs. \$5.45, 12½ lbs. \$13.00, 25 lbs. \$25.00, 50 lbs. \$48.00.

Planet Jr. No. 2 Grass Edger. A revolving wheel edger that trims accurately and speedily. Wooden handle is light and strong and shaped to fit the hand. \$2.60 each.

PERMANENT TURF

Our highest quality, all-purpose formula that will produce the finest and most permanent lawn possible. In sun or shade—good or poor soil. Prepared especially for Chinch Bug infested areas.

Many beautiful lawns throughout certain areas of the eastern coast of the United States and elsewhere have been completely destroyed as a result of the extensive ravages of a recent lawn pest, the Chinch Bug. This bug is of the sucking insect type and does its damage to lawns by piercing the grass blades and shoots near the soil level and sucking out the juices of the grass.

Certain grasses have been found to be highly resistant to the attacks of this insect and it is a careful blending of these grasses that make up our "Permanent Turf."

Such lawn grasses as **Redtop** and **Bents** which are subject to the ravages of the Chinch Bug are not included in this mixture.

Permanent Turf (no Clover). 2½ lbs. \$2.90, 5 lbs. \$5.75, 12½ lbs. \$14.00, 25 lbs. \$27.00, 50 lbs. \$52.00.

Permanent Turf (with Kentish Wild White Clover). 2½ lbs. \$3.25, 5 lbs. \$6.20, 12½ lbs. \$14.75, 25 lbs. \$28.50, 50 lbs. \$55.00.

QUANTITY OF GRASS SEED TO USE

For all general purposes, 1 lb. will sow 150 to 200 sq. ft.; 150 to 200 lbs. per acre. Use one-half these quantities when renovating an old lawn. **Consult Us About Your Lawn Problems—We Are At Your Service**

SEASHORE FORMULA

This mixture is composed of grasses most suitable for areas near the ocean. Will give good results in all sandy soils. Deep rooting grasses that are not injured by salt spray.

2½ lbs. \$2.30, 5 lbs. \$4.50, 12½ lbs. \$11.00, 25 lbs. \$21.00, 50 lbs. \$40.00.

"BANK AND TERRACE" LAWN MIXTURE

The Terrace mixture which we offer is composed of deep-rooting grasses which, if once established, will hold the soil and prevent washing. We advise liberal fertilization and seeding so that the grasses may be quickly established. 2½ lbs. \$2.75, 5 lbs. \$5.25, 12½ lbs. \$12.25, 25 lbs. \$23.50, 50 lbs. \$45.00.

BURNETT'S BEAUTIFUL ASTERS

The introduction of a Wilt-resistant strain of Asters of recent years has helped tremendously in restoring this beautiful flower to popular favor as a garden plant. Up until the time of the origination of this resistant strain, garden enthusiasts were becoming discouraged trying to grow Asters outdoors with the wilt-disease so prevalent. The appearance of this new strain has again awakened interest in the culture of Asters.

For best results the ground cannot be too richly prepared. Plants from seed sown in the open ground in May will bloom in September and October. For July and August flowers, sow in March or April in cold frames or hotbeds. We especially recommend the following as being the best for cutting and general garden use.

ASPARAGUS, Pedigreed Washington

ASPARAGUS KNIVES

The only proper and efficient method of harvesting Asparagus. Each 90c. Illustrated on page 52.

ASPARAGUS ROOTS

Can be planted either in Spring or Fall.

Culture—To make a permanent Asparagus bed, the ground should be trenched deeply and well drained. The trench should be filled up with a rich compost of well-rotted manure and loam. Set roots 12 inches apart in the rows, allowing 2 to 3 feet between rows, spreading out and separating the roots carefully so that the crown will be covered with about 6 inches of soil. In November, when the stalks have been cleared away, give the bed a good top-dressing. In early Spring a liberal application of agricultural salt will be beneficial.

Pedigreed Washington. High quality strain developed by the U. S. Dept. of Agriculture. It is rust-resistant and produces large, straight, dark green shoots with tight, firm tips which do not open until well out of the ground. Strong, 2-year-old roots \$1.75 per 25, \$6.00 per 100, \$50.00 per 1000. Extra large, selected, 3-yr.-old roots, \$2.25 per 25, \$8.50 per 100, \$70.00 per 1000

STRAWBERRY PLANTS — POT GROWN

Strawberry Plants are not difficult to grow and readily adapt themselves to a great variety of soils and climates. Pot-grown plants can be set out in the field at any time during the Spring or late Summer and early Fall months, as their strong, fibrous roots take hold quickly in new location, and can be depended upon to produce bigger crops of larger berries than field-grown layer plants.

A careful selection of varieties will insure fresh berries in the garden from early June until late Fall. This can be accomplished by choosing an **early**, a **midseason** and a **late** fruiting type as

PREPARATION OF SOIL

Dig bed for your plants to a depth of 14 inches and incorporate well rotted manure (not fresh manure) or decomposed leaves with the soil. Afterwards scatter Bonemeal on each bed, raking it well into the surface.

PLANTING INSTRUCTIONS

When plants arrive, unpack at once and place in a shady spot. sprinkling them lightly with water. After hot sun has gone down in early evening, dip each root ball in a pail of water and loosen the soil with the fingers. Be careful not to knock soil from the roots. When planting, set the plants 1 foot apart in the row, spacing the rows 2 feet apart. Plants need a minimum of 6 hours sun a day so do not plant in very shaded location.

RULES FOR SUCCESS

Most important rule is to keep weeds down by cultivating which will also loosen the soil, preserve moisture and induce healthy growth. If good, clean salt hay is available it is advisable to mulch the entire bed about the time green berries are forming, working hay well under the leaves. This practice keeps down weeds during fruiting season, keeps berries clean and free from rot and preserves soil moisture. In early Winter mulch the beds with a light covering of coarse manure, evergreen boughs, salt hay or similar material.

New! BURNETT'S PERENNIALS *Versatile!*

OUR OWN OUTSTANDING INTRODUCTIONS and SELECTED FAVORITES

Our perennial plants are all strong, field-grown or potted stock. They are **vigorous, young plants** that will readily establish themselves permanently in your garden. Do not buy perennial plants by size alone. Large, old clumps are never satisfactory and will soon die out when transplanted. **Plants are not sold in any quantities less than those priced.** 5 plants of anyone varie y are sold at the 10 rate. Take advantage of this saving over the smaller quantities.

Cultural Hints—Never plant Hardy Perennials too deep, and as a rule they prefer a well-drained, loamy soil that is neutral or slightly alkaline. Poor soil should be well prepared beforehand by digging in well-rotted manure with bonemeal added if possible. When fertilizing make sure no commercial fertilizers ever come in direct contact with plant as this will burn young roots and lower foliage. Keep weeds down and soil loose around plants by frequent cultivation. **Purchaser pays transportation charges on all plants.**
